

# Moonbase Explorers Program

Welcome to the Moonbase Explorer Program. This hands-on STEM experience gives your students exposure to multiple science standards, as well as a chance to work cooperatively exploring science in a fun way!

The MBE program lasts 2 ½ hours. Your students will spend time in both our Moonbase Room and in our science lab. To make this an educational and enjoyable experience for all, plan to do the following:

- Bring 5 adult chaperones PER GROUP of 24 students (class), not including the teacher(s), to act as the Mission Specialists. The success of the mission relies heavily on the Mission Specialists' engagement & guidance.
  - *NOTE: If your group has more than 24 students, we will need 10 chaperones, not including the teacher(s).*
- Share the Mission Specialist Information Sheet with your volunteers.
- If your class is larger than 24 students, then we will be dividing the group into 2 separate groups for the entire program. If this is the case, you will need to bring 2 completed crew manifests on your program day.
- Arrive at least 10 minutes prior to your scheduled Moonbase Explorer Program time.
- Plan to have your students use the restroom before your scheduled start time. There will also be a restroom break halfway through the program as well.
- Please refrain from cell phone usage and text messaging during the program as the students require assistance.

Thank you in advance for your focus and participation in this program. We are looking forward to seeing you and your crew of excited astronauts!
